Pablo Egido
Frontend Engineer

Statement

Coming from a design background, I've always liked to focus on the aesthetic side, and it's after some struggle that one realises that without an outstanding performance, the ecuation is incomplete -UX-. Keeping the code-base neat and maintainable is also another area where I try to excell. I consider myself a disciplined, well-organized and straight-to-the-point person, and a pragmatic developer, following "the right tool for the right job" principle.

> I'ts all about solving problems

Education

**2019
Present**

Computer Science Degree
Universitat Oberta de Catalunya
Average Grade: 8,75 / 10

2017

Full Stack Developer Nanodegree
Udacity

**2010
2014**

Advertising and Marketing Degree
Cesine

About me

Born in 1992 in Asturias, Spain. I enjoy spending my free time doing stuff than have a positive impact in my life. I'm current- ly focused on combat sports and martial arts. Also practising Yoga is something that fullfills me a lot, both physically and mentally. Also films, reading and -meaningful- traveling is something I think I benefit greatly from.

Work Experience

**2020
Present**

Sngular
Senior Frontend Engineer

At first I helped in an project for building a suite of **UI components using native Web Components and Design Tokens**. Also helped the Sngular People Department to create the **content for the technical interview for Vue** positions.
Now I'm currently working on a project with BBVA that is helping them measuring the implementation of agile methodologies in their corporation with a **webapp built in Vue** using **TDD** and focusing mostly on **performance**.

**2017
2020**

MedUX
Frontend Engineer

After building new features and maintaining existing ones in an old **AngularJS** platform, one of the main accomplishments during my stay here was to convert the platform in a **hybrid AngularJS-Vue**. Some internal Tools were built in **React**.

**2019
Present**

Sya Innova
UI Engineer

Casual collaborator. I've worked in a couple of their projects, all of them build in **Angular**. At the moment I'm helping the team with the UI on their car-fleet managment platform.

**2015
Present**

Freelance
UI Designer / Web Developer

During all my developer experience I've tried to keep doing projects, both on my own and for clients in order to keep leaning and exploring different technologies and stacks, from **Wordpress development**, to personal sites. During this year I have worked mostly with **JAMStack (Nextjs and Nuxt),** but also designing and developoing more complex systems involving microservices with **Node**.
